#### 1、 Adding by sound-wave (Mobile Phones must connect to WiFi to be configured)

Find the sound-wave adding interface, it will show the WIFI name currently connected to the mobile phone, manually key in the WIFI password, and click "Next" to configure the sound-wave. The sound wave configuration needs to wait for about one minute. Once done successfully, the ding-dong sound will stop and there will be a voice prompt. The APP will automatically redirect to the guidelines to add devices.

Note: NO 5.8GHz WiFi Router Support for now

2、 AP Pairing and Adding

1) .Click on the AP distribution network to add, and shows the QR code scanning . After scan succeed, it will automatically redirect to the WIFI hotspot connection ;

2) .Click to join and wait for the APP to automatically connect to the hotspot;

3) .Once the connection is successful, it will redirect to the WIFI configuration, select the WIFI

to be configured by the camera, Key in the correct WIFI password, Configure Wireless and add;

4) After the adding is done, a confirmation will show up, select the correct name, and click OK.

# 2)Adding 4G Camera

Long Press for 3-5 seconds, release it after hearing the music prompt, and see the blue light of the indicator flashing (the blue light does not flash, the camera is not connected to the network), open the CamHipro APP, click on the 4G camera , and then align the label on the camera, scan the QR code, and click OK after success.

# 四、 Sharing with others

- 1. Click the gear in the lower right corner to find the sharing icon in next step;
- 2. Click the share button in the upper right corner of the interface to setup the sharing;
